

Robust Construction

Arms manufactured from HARDOX® steel ensure exceptional durability while the casing enhances the crusher's strength and robustness, protecting it from debris and concrete fragments during demolition.

Easy Maintenance

Replaceable cutting teeth and concrete crushing jaws simplify maintenance and reduce downtime significantly.

Special Arm Design

Specially shaped arms provide high strength and optimal force distribution for superior crushing performance.

High Power to Weight Ratio

Extremely powerful performance with small carrier devices, offering exceptional weight-to-power efficiency.

Free or Hydraulic 360° Rotation

Hydraulic 360° rotation or free rotation enabled by a well-balanced weight design, with an internal pressure intensifier included as standard equipment.

Mini-booster 500 bar

High-pressure hydraulic mini-booster delivers maximum crushing and cutting force for tough materials.
